

Model 385

FLUSH TIP PRESSURE TRANSMITTER

Viatran 385 flush tip sensor for hydraulic fracturing applications including manifold charge and pump suction pressure measurements.

- Special design minimizes torque effect on the diaphragm, which eliminates the need to make adjustments to the instrument after installation.
- Able to withstand pressure spikes up to 5x pressure range, extends life of the unit when cavitation is a risk in the system.
- Designed with rugged stainless steel diaphragm, minimizes wear on sensor which affects quality of data being collected.
- Fully sealed housing prevents fluid ingress which damages electronics and shortens life of unit.
- Flush sensor prevents clogging, less down time for cleaning.
